

2000 Census Population Data

by Jim Adams, Idaho Department of Labor

The U.S. Census Bureau has begun the release of data from the 2000 Census. The initial release is of unadjusted count numbers and is intended to be used in Congressional (U.S. House of Representatives) and state legislative district reapportionment and re-mapping.

Although Idaho was the fifth fastest growing state between 1990 and 2000, the numeric change was not enough to change Idaho's number of Representatives in the U.S. Congress. Idaho will continue to send 2 Representatives to that body. It is likely there will be some geographic realignment of Idaho's two Congressional Districts for the election of these Representatives.

It is likely the 2000 Census numbers will cause some realignment of the Idaho legislative districts, and the number of legislators to be elected in the broader geographic areas of the state.

Eventually, the new census data will be incorporated into the models used to estimate employment and unemployment, and later census data releases will provide more detailed information on the demographics of Idaho's population. There will be several cases in which 2000 data will not be directly comparable to previous census data. For example, the number of racial categories was expanded, and census respondents were able to identify more than one category. Occupational titles were changed. In order to achieve better sampling for the "long form," some of the geographical boundaries of census districts were altered.

Even with these changes, the basic population count is by standard political boundaries, i.e. state and county. The numbers presented herein are the "unadjusted" data released by the Census Bureau and, therefore, have not been adjusted for a statistical estimate of persons not counted.

Since 1870, Idaho has experienced population growth in each of the decades between a decennial

census. Between 1990 and 2000, Idaho's population increased by 287,204 persons. This was a 28.5 percent increase, making Idaho the fifth fastest growing state between 1990 and 2000. Idaho's 2000 population of 1,293,953 places it 39th in the ranking of states by population.

Within Idaho, all but two counties—Butte in eastern Idaho and Shoshone in northern Idaho—experienced population gains. In relation to the state's overall population, these losses were very small in number and percentage change. Several sparsely populated counties—notably Boise and Teton—had high growth rates, but the numeric change was small. Parts of Boise County, which is adjacent to the Boise Metropolitan Statistical Area (MSA), have become "bedroom" communities for the MSA—a trend that is likely to continue. Teton County, in eastern Idaho, is at the western base of the Teton Range of the Rocky Mountains. The Jackson Hole region of Wyoming is just east of this mountain range, and there has been an influx of people into Teton County for less expensive housing, and general recreation and life-style reasons.

The more highly populated counties (which by Idaho standards means more than 25,000 people, and of which 12 of 44 counties meet this criteria) continued to grow. Some of these grew at a pace above the state's average of 28.5 percent: Ada at 46.2 percent; Canyon at 45.9 percent; Elmore at 37.4 percent; and Kootenai at 55.7 percent. All but Kootenai County abut Ada County, which is home to the state's capital city of Boise. Kootenai County is in the northern Panhandle region of the state and is in close proximity to the Spokane, Washington metropolitan area.

Ten Idaho counties experienced single-digit growth. With the exception of Minidoka County, all of these counties are sparsely populated, with a 2000 Census population of less than 12,000 people. Minidoka County is almost double that size and is

almost totally reliant on farming and food processing. The other counties with small population gains are generally dependant upon the natural resource industries of mining, wood products, or agriculture. Mining and wood products industries have lost a significant number of jobs in recent years, and agriculture employment has not grown.

There are only six Idaho counties with a population of 50,000 or more, and just three have a population in excess of 100,000. Collectively, the three most-populated counties—Ada, Canyon, and Kootenai—had a population growth of 175,384 persons. This was 61.1 percent of the state's total population growth between 1990 and 2000.

With a 2000 population of 185,787, Boise is the state's largest city and accounts for 61.7 percent Ada County's population, which is the most populous county in the state. Boise grew by 46.7 percent during the decade but this growth rate was outpaced by the other incorporated cities in the county. The city with the second-highest numeric

growth was Meridian, which adjoins Boise within Ada County. Other suburban communities within Ada County more than doubled their populations; the exception was Garden City, which is an incorporated town nestled in the Boise City limits.

Placerville was the fastest growing Idaho city, at 328.6 percent. Numerically, however, this small mountain settlement located about 35 miles north of Boise only gained 46 new residents.

There were only a few cities that recorded a population loss. Even though the numeric population loss was small, it does signify the economic plight of these communities, which are very rural and largely dependent upon natural resource industries.

A variety of population tables are included in this section. Readers who desire to have computer-based tables are directed to the U.S. Census Bureau's 2000 Census Web site with the most direct access to the 2000 Census tables at: <http://www.census.gov/main/www/cen2000.html>

U.S. Census Bureau

FYI Table 1 — Resident Population

Idaho

Year	Resident Population
2000	1,293,953
1990	1,006,749
1980	944,127
1970	713,015
1960	667,191
1950	588,637
1940	524,873
1930	445,032
1920	431,866
1910	325,594
1900	161,772
1890	88,548
1880	32,610
1870	14,999

1. The resident population excludes the overseas population.

2. Congressional apportionment for each state is based upon (1) the resident population and (2) the overseas U.S. military and federal civilian employees (and their dependents living with them) allocated to their home state, as reported by the employing federal agencies.
